

2023 Annual Water Quality Report and Performance Report on Water Use Efficiency

Part of the City of Lynnwood Public Works Department's ongoing commitment is to enhance the quality of life in our community. One way we do this is by providing high quality water.

This report contains important information about your water. Have someone translate it for you or speak with someone who understands it.

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, o hable con alguien que lo entienda.

2022 Annual Water Quality Reports and Performance Report on Water Use Efficiency

Lynnwood Water Consumers,

One of the City of Lynnwood's highest priorities is the health and safety of our citizens. This priority relates directly to our Community Vision which states that we will "build a healthy and sustainable environment". By testing our water regularly, maintaining the system of pipes and reservoirs and meeting or exceeding all state and federal water quality requirements, the City's Public Works Department is committed to providing the highest quality drinking water possible. We are pleased to bring you the attached Annual Water Quality Report. In this report you will find information on:

- Our drinking water source
- Regulations and programs that protect the high quality of our water
- 2022 Water Quality Analysis results
- Other helpful information and resources from the Public Works Utility Division

Lynnwood has been actively rebuilding and maintaining our water supply system. Each year we also replace old sections of water mains. This type of important infrastructure work is ongoing and ensures a sustainable system that will provide adequate and clean water to our community for years to come.

We recently replaced our 8000-plus water meters with radio read technology. Look for information in the future about how this technology benefits you.

The Public Works Department's dedicated staff works hard to continually look for ways to improve our utility service and products. We encourage you to contact our Utility Supervisor, at 425-670-5241 with any questions, comments or suggestions.

Sincerely,
CITY OF LYNNWOOD

CITY OF EVERETT

2022 Water Quality Analysis Results

Detected Regulated Contaminants

Parameter	Major Source	Units	EPA Regulations		Everett Water Results		
			Ideal Level/Goal (MCLG)	Maximum Allowable (MCL)	Range or Other	Average Value or Highest Result	Comply?
Total Coliform Bacteria	Naturally present in the environment	% Positive	0	5% Positive per Month	None	0%	Yes
Total coliform bacteria monitoring tracks microbial quality in the water distribution system. Everett collects around 125 samples per month or 1,500 per year. No total coliforms were detected in 2022.							
Fluoride	Dental health additive	ppm	2	4	0.3–0.8	0.7	Yes
Fluoride is added to your water in carefully controlled levels for dental health. Due to equipment maintenance, there were three days in 2022 when fluoride was not added to the water.							
Residual Disinfectant Level (free chlorine)	Added as a drinking water disinfectant	ppm	4.0 (MRDLG)	4.0 (MRDL)	0.3–1.0	0.7	Yes
Haloacetic Acids (5) (HAA5)	By-product of drinking water chlorination	ppb	N/A	60	19–52 ¹	43 ²	Yes
Total Trihalomethanes (TTHM)	By-product of drinking water chlorination	ppb	N/A	80	30–52 ¹	46 ²	Yes
Haloacetic acids and trihalomethanes form as by-products of the chlorination process that is used to kill or inactivate disease-causing microbes. The TTHM and HAA5 results are from eight locations in Everett, which are monitored to determine compliance with current regulations. ¹ Range of results taken from all eight locations. ² Highest locational running annual average of the eight sites that were monitored.							
Turbidity	Soil erosion	NTU	N/A	TT	100%	0.05	Yes
Turbidity is a measure of the amount of particulates in water expressed in Nephelometric Turbidity Units (NTU). Particulates in water can include bacteria, viruses and protozoans that can cause disease. Turbidity measurements are used to determine the effectiveness of the treatment processes in removing these particulates. The values reported are the lowest monthly percentage of samples that met the EPA turbidity limit and the highest four-hour combined water turbidity measurement obtained during the year. In 2022, no filtered water turbidity results were above the EPA 0.3 NTU limit, so the lowest percentage was 100 percent. The plant targets production of filtered water turbidities of 0.10 NTU or less.							

Detected Unregulated Contaminants

Parameter	Units	Ideal Level/Goal (MCLG)	Everett Water Results	
			Range Detected	Average Value
Bromodichloromethane	ppb	0	1.1–2.6	1.7
Chloroform (trichloromethane)	ppb	70	29–50	36
Dichloroacetic Acid	ppb	0	3–20	13
Trichloroacetic Acid	ppb	20	14–29	22
These substances are individual disinfection by-products for which no MCL standard has been set, but which must be monitored to determine compliance with the USEPA Stage 2 Disinfection By-products Rule MCLs for Total Trihalomethanes and Haloacetic Acids (5).				

Lead, Copper and pH

Parameter	Major Source	Units	EPA Regulations		Everett Water Results		
			Ideal Level/Goal (MCLG)	Action Level (AL)	90th % Level	Homes Exceeding the AL	Comply?
Lead	Plumbing, erosion of natural deposits	ppb	0	15	2	0 of 108 (0%)	Yes
Copper	Plumbing, erosion of natural deposits	ppm	1.3	1.3	0.093	0 of 108 (0%)	Yes
<p>USEPA and state regulations require water systems to monitor for the presence of lead and copper at household taps every three years. Everett and many of the water systems that it supplies conduct lead and copper monitoring in the combined service area as a regional group. The above data was collected in 2021. The next required round of sampling will be in 2024. The 90th% level is the highest result obtained in 90 percent of the samples collected when the results are ranked in order from lowest to highest. In the past, the results for water tested before it enters household plumbing were even lower than the tap results. This indicates that there is virtually no lead or copper in the water, but household plumbing may contribute to lead and copper at the tap.</p>							
pH	Soda ash is added to reduce water corrosivity by increasing pH and alkalinity	s.u.	Daily Avg 7.6	Min Daily Avg 7.4	Average 7.6	Minimum 7.1	Yes
<p>The Washington State Department of Health requires Everett to operate corrosion control treatment at or above a minimum daily average pH of 7.4. Everett measures pH six times per day (once every four hours). The average daily pH cannot be below 7.4 for more than nine days every six months. In 2022, the average daily pH was never below 7.4.</p>							

Required Lead Statement. The USEPA drinking water regulations require this statement be included with the lead and copper sampling results, regardless of the levels observed.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Everett Utilities Division is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Required Treatment Polymer Statement:

During water treatment, organic polymer coagulants are added to improve the coagulation and filtration processes that remove particulates from water. The particulates that are removed can include viruses, bacteria and other disease-causing organisms. The USEPA sets limits on the type and amount of polymer that a water system can add to the water. In addition to the EPA limits, the State of Washington requires that all polymers used be certified safe for potable water use by an independent testing organization (NSF International). During treatment, Everett adds only NSF approved polymers and the levels used are far below the safe limits set by the USEPA.

Required Definitions:

Maximum Contaminant Level Goal (MCLG) – The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Contaminant Level (MCL) – The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available water treatment technology.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Treatment Technique (TT) – A required process intended to reduce the level of a contaminant in drinking water.

Action Level (AL) – The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements which a water system must follow.

Parts per Million (ppm)/ Parts per Billion (ppb) – A part per million means that one part of a particular contaminant is present for every million parts of water. Similarly, parts per billion indicate the amount of a contaminant per billion parts of water.

Not Applicable (N/A) - Means EPA has not established MCLGs for these substances.

Voluntary Information:

Parameter	Units	Everett Water Results	
		Range Detected	Average Value
Alkalinity ^{1,2}	ppm	9.8–23.4	17.1
Aluminum ¹	ppm	0.008–0.048	0.02
Arsenic ³	ppb	<0.1–0.2	0.1
Calcium Hardness ^{1,2}	ppm	7.5–14.3	9.4
pH ¹	s.u.	7.7–9.0	7.9
Sodium ³	ppm	5.3–6.7	6.1
Total Hardness ^{1,2}	ppm	10.1–16.1	12.1
¹ Results from samples collected from 26 locations in the Everett distribution system. ² Hardness and alkalinity units are in ppm as CaCO ₃ (calcium carbonate equivalent units). ³ Arsenic and Sodium were monitored at the treatment plant effluent.			

Drinking Water Source

Your drinking water comes from the City of Everett's Spada Lake Reservoir, which is located at the headwaters of the Sultan River and the Sultan Basin Watershed. Created in 1965 by the construction of Culmback Dam, Spada Lake Reservoir holds about 50 billion gallons of water. A watershed is a geographic area where all the precipitation drains into one body of water. In the Sultan Basin Watershed, rain and snowmelt flows from the Cascade Mountains into creeks and streams that drain into Spada Lake Reservoir.

The Sultan Basin Watershed covers an area of 84 square miles of mountainous terrain and is one of the wettest watersheds on the west side of the Cascade Mountains. The area's annual rainfall of 165 inches is just a few inches less than the Hoh Rain Forest on the Olympic Peninsula.

From Spada Lake Reservoir, the water flows through a tunnel and pipeline to Chaplain Reservoir where it is held in preparation for treatment at the nearby City of Everett Treatment Plant. Chaplain Reservoir is a small lake located about 7 miles downstream from Spada Lake Reservoir and holds about 4.5 billion gallons of water.

After treatment, your drinking water is pumped to Alderwood Water District facilities in South Everett. The District transports the drinking water to reservoirs just north of Lynnwood. The Lynnwood distribution system is supplied from these reservoirs.

Potential Health Effects

Drinking water, including bottled water, may reasonably be expected to contain some small amounts of contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about the contaminants can be obtained by calling the EPA's Hotline (1.800.426.4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking tap water from their health care providers. EPA/CDC guidelines on appropriate means to lesson the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1.800.426.4791).

To Get Involved

3

There are several ways you can get involved in water quality issues. You can communicate with elected officials, participate in public hearings and attend City Council meetings. Check our website at www.lynnwoodwa.gov for information on public meetings regarding water quality, water policies and other issues, or call us at 425.670.5241.

Mainline and Dead End Flushing

You may see Public Works crews in your neighborhood flushing water lines. This is necessary to maximize water quality by preventing stagnant water and naturally occurring sediments from accumulating in the system. Ideally a system of water mains is designed in a pattern of interconnecting loops. This allows water to flow freely throughout the system as demand occurs. Because of geography and how streets and neighborhoods lie, the water system also contains dead end mains. These

locations are where water can become stagnant in times of low flow. It is necessary to periodically flush the water out of the dead-end mains through a fire hydrant. Flushing helps keep your water quality high and minimizes the chance of taste or odor problems.

Water Conservation

Metering Water Consumption

Metering tells us how much water we buy and sell to our customers. Your utilities department measures all the water it uses for maintenance as well as monitoring the meters to set a base line for water loss in the water distribution system. By using this information, we can fundamentally develop a data base for a useful Water Use Efficiency program.

Water Conservation Program 2022

The City of Lynnwood participated in the water conservation school program that is administered by Triangle Associates through the City of Everett. Below is the list of programs that were completed for **City of Lynnwood in 2022**. Please note that these numbers are for the calendar year, not school year.

Overall, the number of students reached in 2022 are back to pre-COVID numbers, with some wholesalers seeing increased interest from local schools. Triangle continued to offer online workshops through whatever virtual environment worked best for the individual classrooms and schools, though they have found that most schools are looking for in-person learning (the table below denotes if the lesson was virtual). After being piloted for the 2020-21 school year, Water You Share (grade 4-5) was permanently added into the rotation for the 2021-22 school year. This workshop expands upon topics covered in Water You Know (grade 2-3) and allows us to offer something new to students that may have encountered our lesson in earlier grades. Water You Share explores the history of the City of Everett water system and how water is a shared, community resource. Individual action planning is an aspect of this newer workshop.

It is official, this water conservation education program has been around long enough that Triangle just hired on an educator that remembers us coming to present at her classroom! I also wanted to share one teacher’s comment about Water You Know, *“This is such a great workshop. I have you all in every year and still manage to learn something new.”* And, I am pleased to say that we continue to see high evaluation marks for our program from students and teachers, alike.

Water Conservation School Program Summary 2022* City of Lynnwood

School Name	School District	Water District	Lesson Name	# of Classes	# of Students
Spruce Elementary	Edmonds School District	City of Lynnwood	H2O & You	3	90
Lynndale Elementary	Edmonds School District	City of Lynnwood	Water You Know	3	75
Lynndale Elementary	Edmonds School District	City of Lynnwood	Water You Share	2	50
TOTAL				8	215

*These figures are for the period starting January 1, 2022 and ending December 31, 2022

This information is provided by the City of Everett

Indoor & Outdoor Water Saver Kits

Water is a staple of our existence and using water efficiently needs to be a part of our daily lives, not just when there are government restrictions in place. We have a limited supply of water and we must always use it carefully.

The City of Lynnwood water department offers all of our customers FREE indoor and outdoor water saver items. The outdoor items include a Hose Nozzle, an Automatic Shut Off Timer, and Moisture Meters. The indoor water saver kits help reduce the flow of water from your showers and faucets. They are easy to install and are very durable.

Using these items contained in the water conservation kit can save the average household of three up to 50,000 gallons of water a year! Install them now to help protect what is common today and priceless tomorrow! Please stop in and pick up your conservation kit at City Hall, 19100 44th Ave W

Summer Yard Watering Calendars

Every year a Summer Yard Watering Calendar is posted on our website or you can stop in and pick up a copy at City Hall, 19100 44th Avenue West.

Leak Detection

One way of saving water is to find and repair leaks in the distribution system. These leaks aren't always obvious and are hard to detect through normal methods. However, we employ a technology that operates on the same radio wave frequencies that the leaks produce. We have had great success with this technology which places our repair crews within a few inches of the leak.

Input from our customers

“We want to hear from you!” This is the motto that is shared by all Public Works employees. We hold several public outreach meetings which are a great way to listen to the concerns of the citizens as well as talk to our council

about any ideas you may have for conservation, making the Water Use Efficiency better, and more. We have also advertised and sent out watering calendars to encourage community members to water their yards only every three days to help conserve our precious resource. The Utilities department also has our water loss record available to the public. On average City reports have shown a 8.9% unaccounted water loss for 2022.

Conservation Billing

We are using a conservation billing system as a way to encourage wise water use. After the base rate is charged, the City of Lynnwood charges more per unit at higher levels of use.

Help for Low Income Customers

Lynnwood’s Utilities provide programs to assist our low-income customers. To get more information about these programs please visit: <https://www.lynnwoodwa.gov/ubdiscounts>

In Conclusion

Conservation of our natural resource is a goal we have taken seriously as we developed our report on Water Use Efficiency to the stringent guidelines of the Lynnwood Water Comprehensive Plan, which forecasts our water needs over a six-year period. We also take the opportunity to reevaluate these needs every six years to determine how we are doing in meeting our goals. The Water Comprehensive Plan can be found on our website at www.lynnwoodwa.gov. You can also stay in touch with Lynnwood Public Works by signing up for email newsletters at www.lynnwoodwa.gov/eNews and follow us on Twitter [@LynnwoodStreets](https://twitter.com/LynnwoodStreets)
