Issued: 10/04/2021 **Sub-Type:** Common Areas **Fees:** \$467.87
Description: Islandia Condominiums HOA: Cabana work will be preformed in four separate steps to maintain two exit ways for occupants of Cabana to gain access to the public way. These are identified on the plans as four quadrants.
Work to field inspected and approved by architect &/or structural engineer for verification that existing conditions are aligned with assumptions made on the construction documents.
We propose to utilize a "subject to field inspection" verification process once construction is underway. John Smith our structural engineer will be available to visit the site on an as needed basis, where field sketches will be generated for city review/approval durning the construction purposes. Please refer to the attached photo showing some of these conditions.
The attached drawings are based on:
1. Phase I, Initial permit drawings focus solely the exterior exit path of the Cabana, (with the permit documents for the two condo buildings to follow after the Cabar is under construction).
2. The Cabana is arranged with the exterior walkway extending 360 degrees around the entire building. We intend to work only on one quadrant at a time. as outline on the site and floor plans. This will thereby maintain the necessary two means of egress to the public way.
3. Decking removal and replacement.
a. "Superstructure" or beam/joist system, will be replaced as necessary. Due to the close proximity of finish grade to these members, we will utilize new pressure treated members and blocking, set on concrete peers; this will likley not maintain the 24" separation to finish grade. Only after partial removal of the decking, will we able to determine the specifics of this framework. Should changes be necessary, we will issue architectural and/or structural field sketches for the record and review by the City.
b. Support system for Trex decking requires a maximum span of 18 inches, which means inserting new joists between the existing 24" OC bearing lines of the remaining joists, thus yielding supports at 12" OC.
4. Railing System: the existing conditions do not exceed the 30" maximum fall to finish grade outlined in the IBC. Yet due to the sequence of construction it is our desire to change out the railings, (with a Trex system), at the same time we are doing the decking. The railing supporting are detailed on the drawings.

Description: LANDLORD WORK: REPLACING 120' OF EXISTING 4" SANITARY SEWER PIP WITH NEW 4" PVC PIPE UNDER INTERIOR CONCRETE FLOOR SLAB
 We are replacing the sanitary sewer line from the existing bathroom in the vacant space adjacent (next door) to Dollar Tree's space. This permit is for suite B, Dollar Tree will be occupying suite A. The sewer line runs under the Dollar Tree slab, which is why the landlord wants to do replace the old pipe before Dollar Tree moves in. The landlord wants to take this opportunity to bring the sanitary sewer pipe up to modern codes, with a like-for-like pipe, in the vacant space so there are no drainage issues for any future tenants. No TI work will be done in Dollar Tree's (suite A) or the vacant space (suite B) at this time, and any future work will have TI permits pulled by the new tenants.

Description: We are changing out and reconfiguring the current office furniture and need the circuits relocated. We also need to extend the dedicated 20A 120V Printer circuit down the power pole and mount a 20A receptacle so that the printer can plug into it. This is needed due to the fact that the provided furniture only has 15A receptacles.
